Habiba Nashat

I am a web developer and a passion for creating innovative solutions to complex problems. In addition, a strong background in programming languages and a keen eye for detail, I excel at designing and implementing web site that meet the needs of users. I thrive in collaborative environments and enjoy working with teammates to deliver high-quality results. Continuously seeking to enhance my skills and stay at the forefront of technological advancements, I am committed to delivering exceptional work and exceeding expectations in every project I undertake.

Experiences

- Designed and developed custom software applications for internal use, increasing efficiency and streamlining processes.

- Collaborated with cross-functional teams to gather requirements, design solutions, and implement software projects from conception to completion.

- Utilized programming languages such as Java, Python, and PHP to create scalable and maintainable code and develop websites using React JS.

Skills

1. Proficient in programming languages such as Java, Python, and PHP.

2. Experience with web development technologies such as HTML, CSS, JavaScript, and PHP.

4. Strong understanding of database management systems like MySQL

5. Ability to work with APIs.

6- Experience in developing website using React JS.

7. Experience with front-end and back-end development.

8. Excellent problem-solving and analytical skills.

9. Strong attention to detail and commitment to writing clean and efficient code.

Education

I am graduated at We school of Applied Technology.
